Dyets Free Irradiation Program

Dyets Inc. will offer free irradiation for most diets on or about the 15th of every other month. Processing will be available in February, April, June, August, October, and December. Below are the basic timeframes for ordering and delivery of sterile diets with this free program.

Diets must be ordered by the 1st of the month (see above).

Diets will be delivered to the irradiator on or about the 15th of the month. They are returned to us about one week later, at which point, we ship them to our customers. Delivery is usually the last week of the month or the first week of the following month.

For orders to be irradiated in the December irradiation, they will ship the beginning of January. No exceptions.

While there is no charge for the irradiation, Dyets uses previously sterilized proteins in diets scheduled to be irradiated. This adds a small increase to the cost of the diet. Certain diets are exempt from this charge, such as L-amino acid-based diets and cereal based diets made with chow that has been sterilized by the manufacturer.

To indicate that a diet is to be irradiated, add the letters "GI" to the end of our catalog number. For example, the AIN-93G diet would change from #110700 to #110700GI.

If your schedule does not allow for the "every other month" processing, orders can be irradiated alone. The processing cost is \$2100.00, regardless of size. This does not include the cost of the diet or any shipping charges.

The standard dosage for our free program is 5-20kGy. Items needing higher doses are excluded from this program.

All Pricing subject to change.
